How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, aux **utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

Manufacturer's Shipments, Inventories and Orders, 1980-1984

Les livraisons, les stocks et les commandes des fabricants, 1980-1984

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

MAY — 1984 — MAI

- Preliminary estimates show the seasonally adjusted value of new orders received in all Canadian manufacturing industries in May 1984 increased 3.2% to $19,231.1 million from the revised April level of $18,631.4 million. New orders in electrical products industries, reflecting the federal government's publicly announced order for radar equipment were up $399.3 million and this gain accounted for most of the 6.0% increase in durable goods industries new orders to $8,684.7 million from $8,196.0 million in the preceding month. In non-durable goods industries, new orders received were valued at $10,546.4 million, up 1.1% from the revised estimate for April of $10,435.4 million.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $19,231.1 millions en mai 1984, ce qui représente une hausse de 3.2% par rapport au total de mois précédent qui était de $18,631.4 millions. Reflétant la commande d'équipement de radar annoncée antérieurement par le gouvernement fédéral, les industries de fabrication de produits électriques ont augmenté de $399.3 millions. Ce gain a contribué à l'augmentation de 6.0% des nouvelles commandes des biens durables qui sont passées de $8,196.0 millions à $8,684.7 millions. Les nouvelles commandes des biens non durables ont atteint $10,546.4 millions, ce qui représente une hausse de 1.1% par rapport à la valeur révisée d'avril de $10,435.4 millions.

- The unfilled orders backlog at the end of May was $21,885.5 million, seasonally adjusted, up 3.6% from the revised April estimate of $21,130.2 million. Unfilled orders increased 3.8% in durable goods industries to $19,639.1 million from $18,923.8 million at the end of April and in non-durable goods industries, the estimate was up 1.8% to $2,246.4 million from $2,206.4 million.

- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à $21,885.5 millions, une hausse de 3.6% par rapport à $21,130.2 millions au mois précédent. Les commandes en carnet des biens durables ont augmenté de 3.8% passant de $18,923.8 millions à $19,639.1 millions, alors que celles des biens non durables se sont accrues de 1.8% passant de $2,206.4 millions à $2,246.4 millions.

- The value of shipments in all Canadian manufacturing industries in May 1984 increased 0.1% to a seasonally adjusted $18,475.8 million from $18,465.6 million (revised) in April. Shipments of durable goods industries declined 1.3% to $7,969.4 million from $8,071.4 million with an $88.0 million decrease in transportation equipment industries accounting for most of the loss. Non-durable goods shipments increased 1.1% to $10,506.4 million from $10,394.2 million a month earlier: an increase of $208.0 million in paper and allied industries was partly offset by a $167.2 million decrease in petroleum and coal products industries.

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à $18,475.8 millions en mai 1984, soit une hausse de 0.1% par rapport au chiffre révisé d'avril ($18,465.6 millions). Une diminution de 1.3% a été enrégistrée pour les biens durables qui sont passés de $8,071.4 millions à $7,969.4 millions. Cette diminution est principalement attribuable à une baisse de $88.0 millions dans l'industrie de fabrication d'équipement de transport. Les livraisons des biens non durables ont augmenté de 1.1% passant de $10,394.2 millions à $10,506.4 millions. Dans ce groupe une augmentation de $208.0 millions dans l'industrie du papier et activités connexes a été contrebalancée par une diminution de $167.2 millions dans l'industrie de fabrication de produits du pétrole et du charbon.

- Inventory owned by manufacturers at the end of May was $32,319.4 million, seasonally adjusted, up 1.1% from the previous month's revised value of $31,971.6 million. Total inventory held increased 1.0% to $33,439.9 million from $33,106.4 million in April with increases of 1.2% in raw materials, 1.2% in goods in process and 0.6% in finished products.

- La valeur désaisonnalisée du total des stocks possédés est passée de $31,971.6 millions à $32,319.4 millions, à la fin de mai, soit une hausse de 1.1%. Pour leur part, les stocks détenus ont augmenté de 1.0% à $33,439.9 millions comparativement à $33,106.4 millions. Des hausses de 1.2% ont été enrégistrées au chapitre des matières premières et des biens en cours de transformation et une autre de 0.6% dans les produits finis.

- The seasonally adjusted ratio of total inventory owned to shipments at the end of May was 1.75:1, up from 1.73:1 in April. The ratio of finished products inventory to shipments remained unchanged at 0.62:1.

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons s'est établi à 1.75:1 en mai, soit une hausse par rapport à celui d'avril 1984 qui était de 1.73:1. Le rapport des produits finis aux livraisons est resté à 0.62:1.

- Not adjusted for seasonal variation, manufacturers' shipments in May 1984 were estimated at $19,849.0 million, 8.7% higher than the revised April value of $18,264.1 million. Cumulative shipments for the first five months of 1984 climbed 17.8% to an estimated $92,-

- On a estimé à $19,849.0 millions les livraisons non désaisonnalisées en mai 1984, ce qui représente un gain de 8.7% par rapport à la valeur révisée d'avril qui était de $18,264.1 millions. Pour les cinq premiers mois de 1984, les livraisons estimatives ont totalisé $92,239.1 millions, soit un accroisse-

239.1 million from the January-May 1983 level of $78,-301.9 million.

ment de 17.8% par rapport à $78,301.9 millions au cours de la période correspondante de 1983.

FOOTNOTES

Table 1

(1) Separate series for the Yukon and the Northwest Territories are not published, but provision is made for them in the Canada total.

Table 3-4

(1) The series for raw materials in the petroleum industries; goods in process in the furniture and fixtures industries; and inventory held but not owned in the machinery and equipment, transportation equipment and electrical products industries contain no significant seasonality. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values when repeated may result from rounding techniques in data.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées; cependant elles sont inclues dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans les industries des machines et du matériel, des transports et produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the March 1984 publication are the first to be adjusted to the 1981 census. Values for prior years to 1981 have been previously benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de mars 1984 sont les premières qui soient ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census*.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

Manufacturer's Shipments, Inventories and Orders, 1980-1984

Les livraisons, les stocks et les commandes des fabricants, 1980-1984

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

JUNE — 1984 — JUIN

- Preliminary estimates show the seasonally adjusted value of new orders received in all Canadian manufacturing industries in June 1984 increased 0.5% to $19,386.0 million from the revised May level of $19,291.2 million. New orders in durable goods industries increased 1.6% to $8,855.0 million from $8,717.2 million: the advance reflected gains of $330.5 million in the primary metal industries, $173.0 million in machinery industries and $94.8 million in metal fabricating industries. However, in electrical products industries, new orders were down $389.1 million from the May level which included the federal government order for radar equipment. In non-durable goods industries, new orders received were valued at $10,531.0 million, down 0.4% from the revised May estimate of $10,574.0 million.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $19,386.0 millions en juin 1984, ce qui représente une hausse de 0.5% par rapport au total du mois précédent qui était de $19,291.2 millions. Dans les industries des biens durables, la valeur estimative de $8,855.0 millions en juin était supérieure de 1.6% à la valeur de mai ($8,717.2 millions). Cette augmentation est principalement attribuable à des gains de $330.5 millions dans l'industrie de première transformation des métaux, de $173.0 millions dans l'industrie de fabrication de machines et de $94.8 millions dans les industries de fabrication de produits en métal. Dans les industries de produits électriques, les nouvelles commandes ont chuté de $389.1 millions, reflétant ainsi la commande de radar placée en mai par le gouvernement fédéral. Les nouvelles commandes des biens non durables ont atteint $10,531.0 millions, une baisse de 0.4% par rapport à la valeur de mai qui était de $10,574.0 millions.

- The unfilled orders backlog of manufacturers at the end of June was $22,580.0 million, seasonally adjusted, up 2.9% from the revised May estimate of $21,937.8 million. Unfilled orders increased 3.1% in durable goods industries to $20,305.0 million from $19,689.5 million and in non-durable goods industries, the estimate was up 1.2% to $2,275.0 million from $2,248.3 million.

- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à $22,580.0 millions, une hausse de 2.9% par rapport au mois précédent ($21,937.8 millions). Les commandes en carnet des biens durables ont augmenté de 3.1%, passant de $19,689.5 millions à $20,305.0 millions, alors que celles des biens non durables ont augmenté de 1.2%, passant de $2,248.3 millions à $2,275.0 millions.

- Manufacturers shipments in June 1984 increased 1.4% to $18,743.8 million, seasonally adjusted, from the revised estimate of $18,483.6 million in May. Shipments of durable goods industries were up 3.6% to $8,239.5 million from $7,951.5 million: most of the gain came from increases of $86.5 million in machinery industries, $65.8 million in metal fabricating industries and $59.4 million in transportation equipment industries. Non-durable goods shipments decreased 0.3% to $10,504.3 million from $10,532.1 million a month earlier as a decrease of $130.0 million in petroleum and coal products industries was only partly offset by an $85.9 million increase in foods and beverages industries.

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à $18,743.8 millions en juin 1984, soit une hausse de 1.4% par rapport au chiffre révisé de mai ($18,483.6 millions). Une augmentation de 3.6% a été enregistrée pour les biens durables, qui sont passés de $7,951.5 millions à $8,239.5 millions. Cette augmentation est principalement attribuable à des gains de $86.5 millions dans les industries de fabrication de machines, de $65.8 millions dans les industries de fabrication de produits en métal et de $59.4 millions dans les industries de fabrication d'équipement de transport. Les livraisons des biens non durables ont diminué de 0.3%, passant de $10,532.1 millions à $10,504.3 millions. Dans ce groupe, une diminution de $130.0 millions dans les industries de fabrication de produits du pétrole et du charbon a été en partie contrebalancée par une hausse de $85.9 millions dans les industries des aliments et boissons.

- Inventory owned by manufacturers at the end of June was $32,408.7 million, seasonally adjusted, up 0.3% from the previous month's revised value of $32,317.1 million. Total inventory held increased 0.3% to $33,449.5 million from $33,346.3 million in May: finished products were up 1.3% and raw materials 0.1% but goods in process decreased 0.7%.

- La valeur désaisonnalisée du total des stocks possédés est passée de $32,317.1 millions à $32,408.7 millions, soit une hausse de 0.3%. Pour leur part, les stocks détenus ont augmenté de 0.3% pour atteindre $33,449.5 millions comparativement à $33,346.3 millions. Des augmentations ont été enregistrées au chapitre des produits finis (1.3%) et des matières premières (0.1%) mais une diminution de 0.7% a été enregistrée pour les biens en cours de transformation.

- The seasonally adjusted ratio of total inventory owned to shipments at the end of June was 1.73:1, down from 1.75:1 in May. The ratio of finished products inventory to shipments remained unchanged at 0.62:1.

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons s'est établi à 1.73:1 en juin, soit une baisse par rapport à celui de mai, qui était de 1.75:1. Le rapport des produits finis aux livraisons est resté inchangé à 0.62:1.

- Not adjusted for seasonal variation, manufacturers shipments in June 1984 were estimated at $20,131.0 million, 1.4% higher than the revised May value of $19,851.8 million. Cumulative shipments for the first six months of 1984 climbed 16.4% to $112,372.8 million from the January-June 1983 total of $96,501.2 million.

- On a estimé à $20,131.0 millions les livraisons non désaisonnalisées en juin 1984, ce qui représente une hausse de 1.4% par rapport à la valeur révisée de mai qui était de $19,851.8 millions. Pour les six premiers mois de 1984, les livraisons estimatives ont totalisé $112,372.8 millions, soit une hausse de 16.4% par rapport à $96,501.2 millions au cours de la période correspondante de 1983.

FOOTNOTES

Table 1

(1) Separate series for the Yukon and the Northwest Territories are not published, but provision is made for them in the Canada total.

Table 3-4

(1) The series for raw materials in the petroleum industries; goods in process in the furniture and fixtures industries; and inventory held but not owned in the machinery and equipment, transportation equipment and electrical products industries contain no significant seasonality. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values when repeated may result from rounding techniques in data.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées; cependant elles sont inclues dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans les industries des machines et du matériel, des transports et produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the March 1984 publication are the first to be adjusted to the 1981 census. Values for prior years to 1981 have been previously benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de mars 1984 sont les premières qui soient ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census.*

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

HIGHLIGHTS

POINTS SAILLANTS

JULY — 1984 — JUILLET

- Preliminary estimates show the seasonally adjusted value of new orders received in all Canadian manufacturing industries in July 1984 decreased 3.4% to $18,688.7 million from the revised June estimate of $19,352.5 million. In durable goods industries, new orders with an estimated value of $8,102.6 million fell 7.7% from the June value of $8,774.9 million, most of the decrease results from losses of $466.4 million in transportation equipment industries, $207.2 million in primary metal industries and $191.9 million in electrical products industries. In non-durable goods industries, new orders received were valued at $10,586.1 million, up 0.1% from June's revised estimate of $10,577.6 million.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $18,688.7 millions en juillet 1984, ce qui représente une baisse de 3.4% par rapport au mois précédent qui était de $19,352.5 millions. Dans les industries des biens durables, la valeur estimative de $8,102.6 millions en juillet était inférieure de 7.7% à la valeur de juin ($8,774.9 millions). Cette diminution est principalement attribuable à des baisses de $466.4 millions dans l'industrie de fabrication d'équipement de transport de $207.2 millions dans les industries de première transformation des métaux, et de $191.9 millions dans l'industrie de fabrication de produits électriques. Les nouvelles commandes des biens non durables ont atteint $10,586.1 millions, ce qui représente une hausse de 0.1% par rapport à la valeur révisée de juin ($10,577.6 millions).

- Shipments in manufacturing industries in July 1984 increased 0.9% to $18,976.6 million, seasonally adjusted from the revised estimate of $18,798.3 million in June. Shipments of durable goods industries were up 1.2% to $8,365.6 million from $8,262.5 million, primarily due to increases of $97.6 million in primary metal industries, $91.0 million in the wood industries and $83.2 million in metal fabricating industries. These increases were partly offset by a $200.7 million decrease in transportation equipment industries. In non-durable goods industries, an increase of $98.5 million in paper and allied industries accounted for most of the gain, as shipments rose to $10,611.0 million for the current month from $10,535.8 million in June.

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à $18,976.6 millions en juillet 1984, soit une hausse de 0.9% par rapport au chiffre révisé de juin ($18,798.3 millions). Une augmentation de 1.2% a été enregistrée pour les biens durables qui sont passés de $8,262.5 millions à $8,365.6 millions. Ce gain est principalement attribuable à des augmentations de $97.6 millions dans l'industrie de première transformation des métaux, de $91.0 millions dans l'industrie du bois et de $83.2 millions dans l'industrie de fabrication de produits en métal. Ces augmentations ont été en partie contrebalancées par une diminution de $200.7 millions dans l'industrie de fabrication d'équipement de transport. Les livraisons des biens non durables sont passées de $10,535.8 millions à $10,611.0 millions. Cette augmentation est due, en majeure partie à un gain de $98.5 millions dans l'industrie de papier et activités connexes.

- The seasonally adjusted unfilled orders backlog at the end of July was $22,204.1 million, down 1.3% from the revised June estimate of $22,492.0 million. Unfilled orders decreased 1.3% in durable goods industries to $19,938.9 million from $20,201.9 million at the end of June. In non-durable goods industries, the estimate was down 1.1% to $2,265.2 million from $2,290.1 million.

- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à $22,204.1 millions, en baisse de 1.3% par rapport au mois précédent qui était de $22,492.0 millions. Les commandes en carnet des biens durables ont diminué de 1.3% passant de $20,201.9 millions à $19,938.9 millions, alors que celles des biens non durables ont diminué de 1.1% passant de $2,290.1 millions à $2,265.2 millions.

- Inventory owned by manufacturers at the end of July was $32,704.7 million, seasonally adjusted, up 1.4% from the previous month's revised value of $32,265.2 million. Total inventory held increased 1.3% to $33,729.7 million from $33,289.5 million in June, with increases of 2.7% in finished products and 1.1% in raw materials. There was, however, a 0.4% decrease in goods in process.

- La valeur désaisonnalisée du total des stocks possédés est passée de $32,265.2 millions en juin à $32,704.7 millions en juillet, soit une hausse de 1.4%. Pour leur part, les stocks détenus ont augmenté de 1.3% passant de $33,729.7 millions à $33,289.5 millions au cours de la même période. Des augmentations ont été enregistrées au chapitre des produits finis (2.7%) et des matières premières (1.1%) alors que les biens en cours de transformation ont subi une diminution de 0.4%.

- The seasonally adjusted ratio of total inventory owned to shipments at the end of July remained at 1.72:1. The ratio of finished products inventory to shipments went to 0.62:1 in July from 0.61:1 in June.

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons est resté inchangé à 1.72.1 en juillet. Le rapport des produits finis aux livraisons est passé de 061.1 à 0.62.1 en juillet.

- Manufacturers' shipments in July 1984 not adjusted for seasonal variation were estimated at $17,351.1 million,

- On a estimé à $17,351.1 millions les livraisons non désaisonnalisées en juillet 1984, soit une baisse de 14.1% comparati-

14.1% lower than the revised June value of $20,187.7 million. Cumulative shipments for the first seven months of 1984, at an estimated $129,780.7 million, were up 16.1% from the $111,749.2 million estimated for the same period in 1983.

vement à la valeur révisée de juin qui était de $20,187.7 millions. Pour les sept premiers mois de 1984, les livraisons estimatives ont totalisé $129,780.7 millions, soit une hausse de 16.1% en regard des $111,749.2 millions obtenus au cours de la période correspondante de 1983.

FOOTNOTES

Table 1

(1) Separate series for the Yukon and the Northwest Territories are not published, but provision is made for them in the Canada total.

Table 3-4

(1) The series for raw materials in the petroleum industries; goods in process in the furniture and fixtures industries; and inventory held but not owned in the machinery and equipment, transportation equipment and electrical products industries contain no significant seasonality. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values when repeated may result from rounding techniques in data.

Note: Figures may not add due to rounding.

NOTES

Tableau 1

(1) Les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées; cependant elles sont inclues dans le total pour le Canada.

Tableau 3-4

(1) La série des matières brutes dans l'industrie pétrolière, des biens en cours de transformation dans l'industrie du meuble et des articles d'ameublement et des stocks détenus mais non possédés dans les industries des machines et du matériel, des transports et produits électriques ne présente aucune tendance saisonnière importante. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the March 1984 publication are the first to be adjusted to the 1981 census. Values for prior years to 1981 have been previously benchmarked to the relevant census and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1981 are projections these totals are subject to adjustment when more recent census data become available. Inventory estimates for December, published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. In addition, some components of inventory are included in the monthly survey's benchmark value that may not be included in census inventories. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog is a normal part of the accounting procedure.

The population is divided into groups of large, medium and small establishments according to the total value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 11,000 establishments in the reporting panel.

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, work in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference, inventory held but not owned, is the value of progress payments received by manufacturers for partially completed items such as aircraft, ships or structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived. At the same time, by

CONCEPTS ET MÉTHODES

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de mars 1984 sont les premières qui soient ajustées en fonction du recensement de 1981. Les chiffres pour les années jusqu'à 1981 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. L'échantillon demeure essentiellement constant d'une année à l'autre puisqu'il est tiré de la liste des établissements du recensement annuel des manufactures. On doit recourir à l'imputation pour les établissements ayant déclaré trop tard pour être pris en compte dans le calcul des estimations mensuelles. Comme les estimations mensuelles postérieures à 1981 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre; elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. En outre, certains éléments des stocks compris dans la valeur-repère de l'enquête mensuelle peuvent ne pas être compris dans les stocks du recensement. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur totale des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 11,000 établissements qui produisent des déclarations.

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, les bâteaux ou des constructions qui utilisent des semi-produits en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme

reflecting the receipt of progress payments in shipments each month, it is possible to reduce the distortion in the affected series that would be caused when responding companies finally treat such items of relatively high value as completed sales.

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. Because unfilled orders are measured, the new orders are the total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Because the sample is drawn from the list of establishments included in the annual census of manufactures, it remains largely constant from one year to the next. Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Definitions, classifications and groupings are taken from the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statistics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

General Time Series Staff,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

investie dans les stocks par les fabricants. De même, en tenant compte des acomptes à valoir dans les livraisons mensuelles, on peut réduire la distorsion qui surviendrait dans les séries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercise comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes dès réceptions, à partir de leurs stocks et qui par conséquent ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue soit pendant ce mois, soit avant. Étant donné qu'on évalue les commandes en carnet, les nouvelles commandes représentent le total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

De plus, les données sur les livraisons totales pour l'année civile ont été rectifiées sommairement en fonction des données préliminaires du recensement des manufactures sur les livraisons totales cette année-là. L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Le calcul des estimations revisées pour le mois précédent et des estimations préliminaires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repère du recensement.

Les définitions, les classifications et les groupes sont ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Series chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Service des séries chronologiques générales
Statistique Canada
Ottawa (Ontario) K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series is a computerized ratio-to-moving average method in use at Statistics Canada. It is the standard computer program to apply the X-11 version of the U.S. Bureau of the Census Method II.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number for seasonally adjusted series, indicates the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one, for the most erratic series it is six. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

Désaisonnalisation

On désaisonnalise des séries en calculant par ordinateur le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurance du programme normalisé qui sert à appliquer les versions X-11 de la méthode II du *U.S. Bureau of the Census.*

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" pour les séries désaisonnalisées indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de six pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Statistics Canada Statistique Canada

Data in Many Forms . . .

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Manufacturing and Primary Industries Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-9832) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Des données sous plusieurs formes . . .

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries manufacturières et primaires,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 990-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)

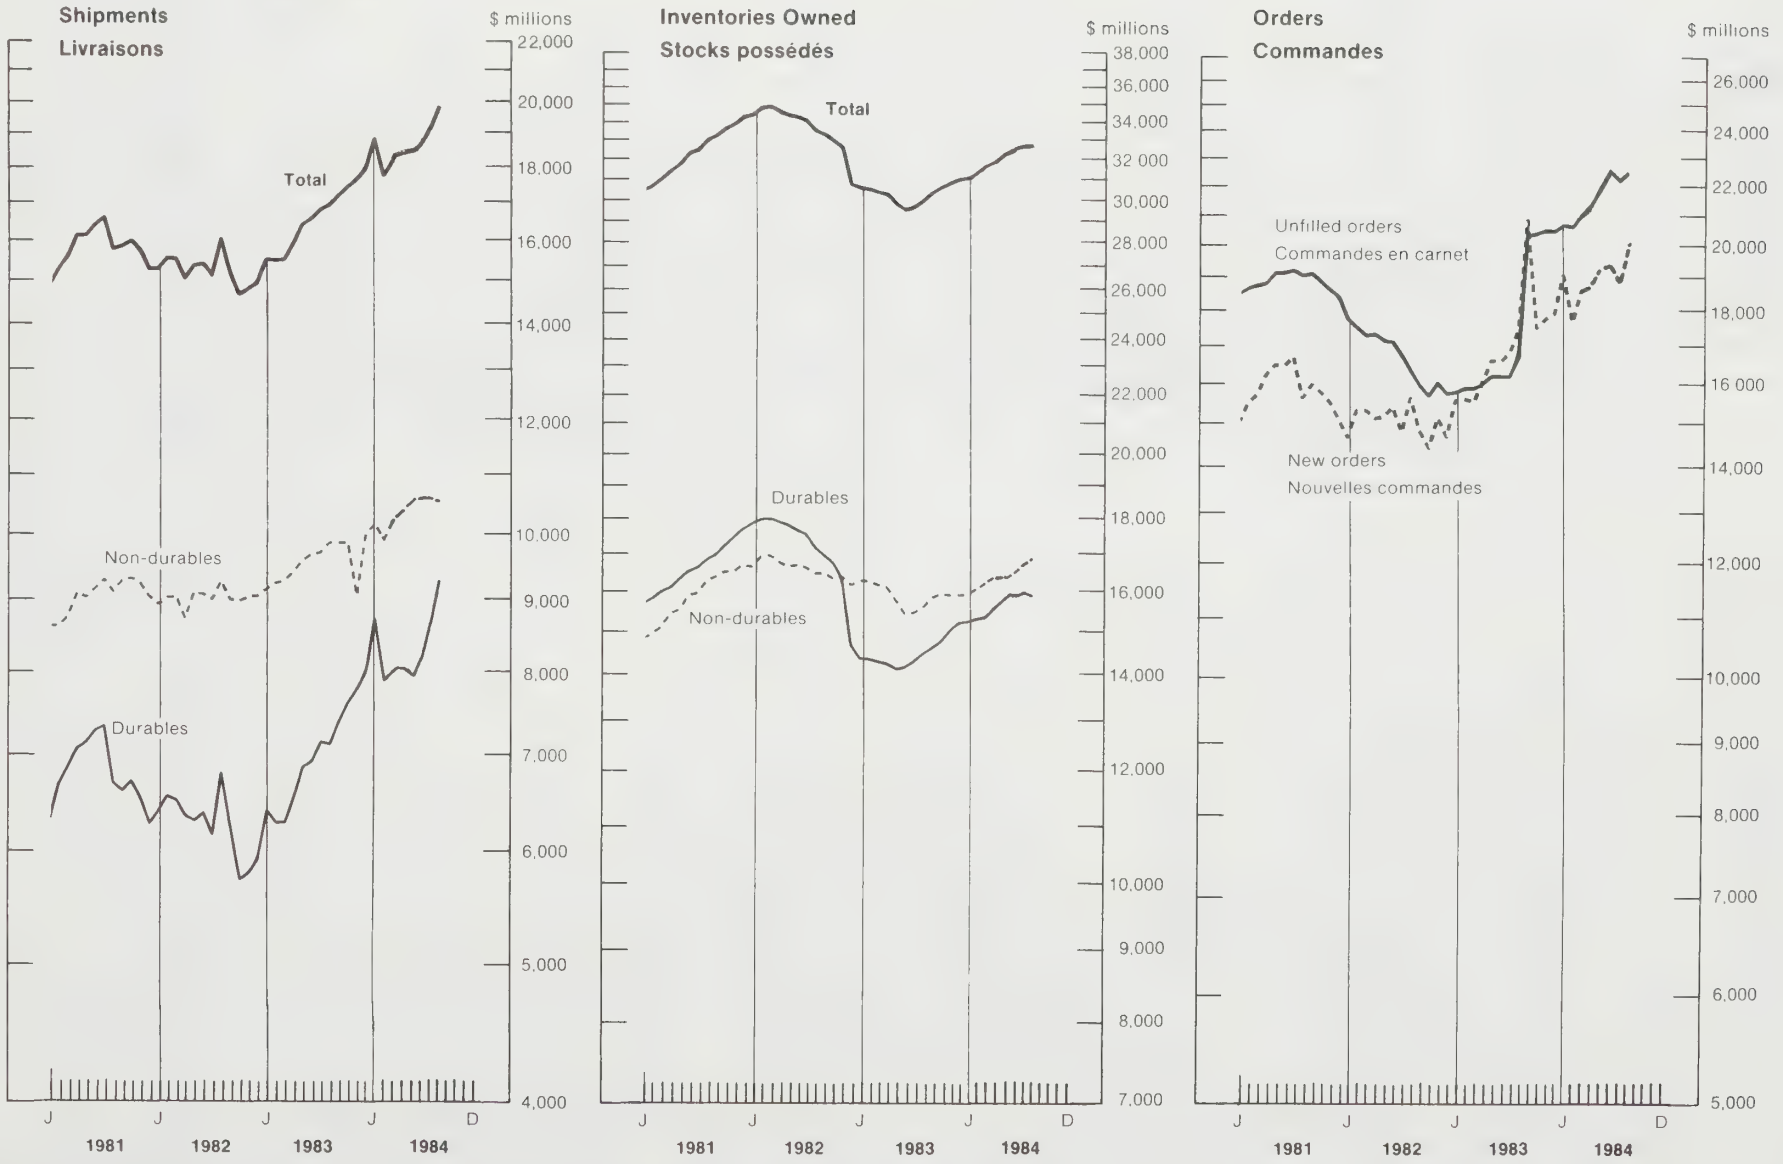
   14 — Fabrication de machines (sauf électriques) 18
   15 — Fabrication d'équipement de transport 19
   16 — Fabrication de produits électriques 21
   17 — Fabrication de produits minéraux non métalliques 22
   18 — Fabrication de produits du pétrole et du charbon 23
   19 — Industrie chimique 23
   20 — Industries manufacturières diverses 24

4. Valeur estimative des livraisons, commandes et stocks des industries manufacturières groupées d'après la classification économique en fonction de l'utilisation:
   Industries des biens de consommation non durables 26
   Industries des biens de consommation durables 27
   Industries des machines et du matériel 28
   Industries des matériaux et des éléments de construction 29
   Industries des autres produits et fournitures intermédiaires 30
   Industries orientées vers l'exportation 31
   Classification complémentaire — industries connexes de l'automobile 32

5. Valeur estimative des livraisons, par groupe d'industries et province 34

6. Valeur estimative des livraisons, commandes et stocks de certaines industries particulières 46

7. Rapports du total des stocks possédés et des produits finis aux livraisons, par groupes d'industries (basées sur des chiffres désaisonnalisés) 69



Concepts et méthodes 70

Manufacturer's Shipments, Inventories and Orders, 1980-1984

Les livraisons, les stocks et les commandes des fabricants, 1980-1984

(Seasonally Adjusted — Chiffres désaisonnalisés)

(Ratio scale — Échelle semi-logarithmique)

HIGHLIGHTS

POINTS SAILLANTS

AUGUST — 1984 — AOÛT

- The seasonally adjusted value of shipments in all Canadian manufacturing industries rose 3.0% to an estimated $19,757.7 million in August 1984, from the revised total of $19,179.2 million in July. Shipments of durable goods were up 7.4% to $9,253.2 million from $8,614.3 million. The increase is largely attributable to a gain of $665.2 million in transportation equipment industries (which reflected a large increase in the shipments of motor vehicle manufacturers) as well as an advance of $130.9 million in machinery industries. There was, however, an $81.4 million loss in primary metal industries. In non-durable goods industries, shipments were down 0.6% to $10,504.5 million from $10,564.9 million.

- Après désaisonnalisation, la valeur des livraisons des industries manufacturières canadiennes s'est établie à $19,757.7 millions en août 1984, soit une hausse de 3.0% par rapport au chiffre révisé de juillet ($19,179.2 millions). Une augmentation de 7.4% a été enregistrée pour les biens durables qui sont passés de $8,614.3 millions à $9,253.2 millions. Cette hausse est principalement attribuable à une augmentation de $665.2 millions dans l'industrie de fabrication d'équipement de transport, reflétant ainsi un accroissement important des livraisons des fabricants de véhicules automobiles, et un gain de $130.9 millions dans l'industrie de fabrication de machines. On note, cependant une baisse de $81.4 millions dans l'industrie de première transformation des métaux. Les livraisons des biens non durables ont diminué de 0.6% passant de $10,564.9 millions à $10,504.5 millions.

- Seasonally adjusted inventories owned by manufacturers at the end of august remained virtually unchanged at $32,704.7 million from the previous month's revised value of $32,688.7 million. Total inventory held increased 0.1% to $33,759.1 million from $33,718.0 million in July, with a 1.2% increase in goods-in-process, a 0.4% decline in raw materials and no change in finished products.

- La valeur désaisonnalisée du total des stocks possédés à la fin d'août n'a pratiquement pas changé, atteignant $32,704.7 millions comparativement à $32,688.7 millions, après révision, en juillet. Pour leur part, les stocks détenus ont augmenté de 0.1% pour se chiffrer à $33,759.1 millions en regard de $33,718.0 millions en juillet. Une augmentation de 1.2% a été enregistrée au chapitre des biens en cours de transformation, une diminution de 0.4% pour les matières premières et aucun changement pour les produits finis.

- The seasonally adjusted ratio of total inventory owned to shipments at the end of August was 1.66:1, down from 1.70:1 in July. The ratio of finished products inventory to shipments went from 0.62:1 in July to 0.60:1 in August.

- Le rapport désaisonnalisé du total des stocks possédés aux livraisons s'est établi à 1.66:1 en août, en baisse par rapport au niveau de 1.70:1 inscrit en juillet. Le rapport des produits finis aux livraisons est passé de 0.62:1 en juillet à 0.60:1 en août.

- Adjusted for seasonal variation, the value of new orders received in August 1984 rose 6.6% to $20,078.6 million from the revised July estimate of $18,837.3 million. In durable goods industries, new orders were valued at an estimated $9,576.0 million, 15.4% higher than the July value of $8,300.7 million. Most of this increase can be attributed to gains of $990.5 million in transportation equipment industries, $232.0 million in electrical products industries and $183.8 million in primary metal industries. In non-durable goods industries, the value of new orders received reached $10,502.6 million, down 0.3% from the revised estimate of $10,536.6 million in July 1984.

- La valeur désaisonnalisée des nouvelles commandes dans l'ensemble des industries manufacturières a été estimée à $20,078.6 millions en août 1984, ce qui représente une hausse de 6.6% par rapport au mois précédent qui était de $18,837.3 millions. Dans les industries des biens durables, la valeur estimative de $9,576.0 millions en août, était supérieure de 15.4% à la valeur de juillet ($8,300.7 millions). Cette hausse est principalement attribuable à des gains de $990.5 millions dans l'industrie de fabrication d'équipement de transport, de $232.0 millions dans les industries de produits électriques et de $183.8 millions dans les industries de première transformation des métaux. Les nouvelles commandes des biens non durables ont atteint $10,502.6 millions, ce qui représente une baisse de 0.3% par rapport à la valeur révisée de juillet ($10,536.6 millions).

- The seasonally adjusted unfilled orders backlog at the end of August was $22,471.0 million, a 1.4% increase from the previous month's revised estimate of $22,150.1 million. Unfilled orders in durable goods industries increased 1.6% to $20,211.1 million from the end-of-July total of $19,888.3 million, and in non-durable goods industries, the estimate was down 0.1% to $2,259.9 million from $2,261.8 million.

- La valeur estimative des commandes en carnet, après désaisonnalisation, s'est établie à $22,471.0 millions, en hausse de 1.4% par rapport au niveau du mois précédent qui se situait à $22,150.1 millions. Les commandes en carnet des biens durables ont augmenté de 1.6% passant de $19,888.3 millions à $20,211.1 millions, alors que celles des biens non durables ont diminué de 0.1% passant de $2,261.8 millions à $2,259.9 millions.

- Without adjustments for seasonal variation, manufacturers' shipments in August 1984 were estimated at $18,-

- On a estimé à $18,948.4 millions les livraisons non désaisonnalisées en août 1984, soit un gain de 8.3% par rapport à la

948.4 million, 8.3% higher than the revised July value of $17,494.6 million. Cumulative shipments for the first eight months of 1984 reached an estimated $148,872 6 million, a 16.0% rise from the $128,286.6 million estimated for the same period in 1983.

valeur révisée de juillet qui était de $17,494.6 millions. Pour les huit premiers mois de 1984, les livraisons estimatives ont totalisé $148,872.6 millions, soit une progression de 16.0% par rapport aux $128,286.6 millions obtenus au cours de la période correspondante de 1983.
